Odysseus

Solanas medium late and high-yielding crisps variety. Due to the starch content, round-oval form and the excellent baking quality Odysseus is predestined as processing raw material. A light yellow flesh and shallow eye depth round that fact off. Because of a rapid tuber bulking, processing can start with green top lifting. The strengths include very good tolerances concerning blackleg, black spot and common scab. Resistant to PCN Ro 1.

Plant

Maturity	Medium late
Plant type	Intermediate
Growth habit	Semi-upright
Color of flower	White
Foliage development	Rapid
Number of tubers	Medium, High
Dormancy	Medium

Tuber characteristics

Tuber shape	Round oval
Flesh color	Light yellow, Yellow
Eye depth	Shallow
Skin color	Yellow
Skin characteristic	Netted

Resistances

Nematodes	Ro 1
Leaf blight	Medium, High
Tuber blight	Medium
Rhizoctonia	Very high
Black leg	High
Common scab	High
Internal rust spot	High
Second growth	High
Damages	High
Bruising	Medium
PVY	Low
PVY ntn	Very high

Yield and Quality

Market outlet	Crisps
Yield	Very high
Share oversize	Medium
Share undersize	Low
Dry matter content	Medium, High
Chips quality after harvest	Very good
Chips quality after longterm storage	Very good
